

## Guidance document for processing PM-JAY packages

### Closed reduction of joint dislocation

**Procedures covered: 4**

**Specialty: Orthopedics**

Package name	Procedure name	HBP 1.0 code	HBP 2.0 code	Package price (INR)	ALOS (in days)
Closed reduction of joint dislocation	Hip	S500037	SB028A	7,400	1
Closed reduction of joint dislocation	Shoulder	S500038	SB028B	5,500	7
Closed reduction of joint dislocation	Elbow	S500038	SB028C	5,500	1
Closed reduction of joint dislocation	Knee	S500037	SB028D	5,500	1

#### Minimum qualification of the treating doctor:

**Essential:** Diploma in Orthopedics with 5 years' experience

**Desirable:** MS/DNB/Equivalent (in Orthopedics)

**Special empanelment criteria/linkage to empanelment module:** Care at Tertiary care facilities - (Procedure for Hip Joint)

#### Disclaimer:

For monitoring and administering the claim management process of **Closed reduction of joint dislocation** NHA shall be following these guidelines. This document has been prepared for guidance of PROCESSING TEAM and TRANSACTION MANAGEMENT SYSTEM of AB PM-JAY for the claims of procedures mentioned above. The hospitals can also refer to this document so that they have the insight on how the claims will be processed. However, this document doesn't provide any guidance on clinical and therapeutic management of patient. In that respect the hospitals and physicians may refer to any other relevant material as per the extant professional norms.

### PART I: GUIDELINES FOR CLINICIANS AND HEALTHCARE PROVIDERS

#### 1.1 Objective:

The purpose of this section is to act as a guidance & a clinical decision support tool for the clinicians in deciding the line of treatment, plan clinical management of patient and decide referral of cases to the appropriate level of care (as required) for treatment of patients under PMJAY and selection of corresponding Health Benefit Package.

It will also serve as a tool for hospitals to determine and submit the mandatory documents required for claiming reimbursement of health benefit package under PMJAY.

#### 1.2 Clinical key pointers:

- **Closed reduction of joint dislocation -Hip**

- Hip dislocations classified as **Anterior & Posterior** based on the direction of dislocation of the femoral head.
- Close reduction is the initial method of treatment, which occurs in the emergency department.
- Anterior hip dislocation is commonly reduced by in-line traction and external rotation.

*Bilateral Anterior Dislocation of hip*

*\*Chee Kidd Chiu et al.*

- **Closed reduction of joint dislocation -Shoulder**

- Majority of human joint dislocations occur in the shoulder.
- Anterior shoulder dislocation is the most common type of shoulder dislocation

*Before and After Anterior shoulder dislocation- closed reduction \* Kuan-Lin Chen et al.*

- **Closed reduction of joint dislocation -Elbow**

- The elbow joint is considered relatively stable; however, elbow dislocations are common occurrence.
- Semilunar notch of the ulna is dislocated posteriorly from the distal humerus.

Before and after closed reduction of Elbow dislocation-

\* Youn Moo Heo et al.

- **Closed reduction of joint dislocation -Knee**

- Knee dislocation is a relatively rare injury but an important one to recognize because **coexistent vascular injury**, if missed, often leads to **limb loss**.
- **Types:**  
**The positional classification:** 5 major types of positional dislocation: medial, lateral, rotatory, posterior, and anterior.  
**The anatomical classification:** ligamentous/anatomical involvement.
- A careful vascular examination is required.
- Time is of utmost concern, as vascular repair delayed more than 8 hours after injury carries an amputation rate of greater than 80%.

### 1.3 Mandatory documents- For healthcare providers

Following documents should be uploaded by the concerned hospital staff at the time of pre-authorization and claims submission:

Mandatory document	Closed reduction of joint dislocation
<b>i. At the time of Pre-authorization</b>	
a. Clinical notes with history, signs, symptoms, evaluation findings, indication for procedure, planned line of management and advice for admission	Yes
b. Clinical photograph of affected part	Yes
c. X-ray labelled with patient ID, date and side (Left/ Right) of affected part	Yes
<b>ii. At the time of claim submission</b>	
a. Detailed Indoor case papers (ICPs)	Yes
b. Procedure / operation notes	
c. Post procedure X-ray labelled with patient ID, date and side (Left/ Right) of affected part	Yes
d. Post Procedure clinical photograph	Yes
e. Discharge Summary	Yes

## **PART II: GUIDELINES FOR PROCESSING TEAM**

### **PART III: GUIDELINES FOR TRANSACTION MANAGEMENT SYSTEM (TMS)**

**3.1 Objective:** To enable setting up of cross check mechanisms/rule engines within the IT platform (TMS) to ensure compliance with STGs and to prevent fraud / abuse of the Health Benefit Package.

**3.2 Below mentioned are the scenarios where a provision would be built in TMS for pop-ups:**

- Was the clinical notes and X-ray report submitted are indicative of procedure? Yes

Till the time the functionality is being developed, the processing doctors shall check the above manually.
